Bioinformatics analysis competences:

RNA-seq(deseq)

Single Cell(seurat, cell ranger)

Phosphoproteomics(MaxQuant)

Epigenomics

16S microbiome(qiime)

R

Python

Statistics

Data analysis

Visualization

Spanish

English

EXPERIENCE

Bioinformatic PhD(Josep Carreras Research Institute, Barcelona) *July 2021-Actually*

- **Multi-omics Analysis of Mantle Cell Lymphoma:** Spearheaded a comprehensive multi-omics analysis (RNA-seq, phosphoproteomics) on mantle cell lymphoma cell lines treated with diverse BTK inhibitors. Presented the results at the ASH convention and co-authored the summary published in "Blood" magazine. Link [here](#).
- **Epigenomic Data Analysis:** Conducted a groundbreaking analysis of epigenomic data, leading to co-first authorship in the publication featured in "Chest" magazine. Link [here](#)
- **PhD Journey:**Finishing a Ph.D. under the mentorship of Dr. Manel Esteller, recognized as one of the most outstanding scientists by Stanford University. Dr. Esteller is part of the esteemed group representing only 0.06% of the most influential researchers globally across all scientific disciplines Link [here](#).

Collaborations initiatives:

- **Single Cell Platform Analysis:** Pioneered a single-cell platform analysis, offering bioinformatics single-cell analysis as a service to external research centers.
- **Genomic Data Visualization Web App:** Led the development of a web application facilitating the visualization and download of genomic data from the center's server. This innovation fosters enhanced data sharing among research groups.
- **Epigenomic Data Analysis Web App with High Performance Cluster (HPC):** Initiated the development of a web application designed to analyze new epigenomic data using a High-Performance Cluster (HPC). This platform ensures efficient and robust analysis, contributing to advancements in genomic research.
- **Automated Epigenomic Data Analysis Web Server with RShiny:** Established a web server streamlining the analysis pipeline of epigenomic data in R, leveraging the capabilities of RShiny. This automated solution enhances efficiency and accessibility for researchers working with epigenomic datasets.

Bioinformatic(Barcelona Supercomputing Center, Barcelona) *Sep 2020-June 2021*

- Designing pipelines for microbial dysbiosis studies(16S technology) with R on biggest european HPC.

Software developer(Everis-NTT Data, Spanish Treasury, Madrid) *Mar 2019-Aug 2020*

- We were developing a comprehensive web application to efficiently manage budget payments for both the Spanish government and the European Community. The development process involves utilizing Java and PL/SQL.

Software developer(Accenture, Madrid) *Feb 2018-Feb 2019*

- 6 week training/selection in which I was in the top quarter
- **First project** (5 months): In BBVA bank client, customization of Calypso financial program in Java. I worked with Jenkins, Github, and Mockito.
- **Second project** (7 months): In Accenture offices for "Caja de ingenieros" client: Preparing configuration for calypso with SQL and making script for windows and Linux. I worked with Maven, Subversion and SQLdeveloper.

EDUCATION AND TRAINING

- **Bioinformatic and statistics master**(Universitat Oberta de Catalunya) Sep 2021-Feb 2023. Python, R, statistics, web servers, JavaScript and html.
- **Bioinformatic master**(Carlos III Health Institute, Madrid) Sep 2019-Apr 2020- Work in close collaboration with scientists and clinicians to interpret analysis results.
- **Scrum Master Certificate**(Scrum.org) 2019
- **Online course "BIG DATA, GENES AND MEDICINE"** University Of New York (Coursera.com) 2018
- **Bachelor's degree in Chemistry**(University of Granada) Sep 2011-June 2017. I managed to publish my bachelor degree final project. Link [here](#).
- **Digital competences:**Singularity, Slurm, Java, SQL, Subversion, Github, Jenkins, Maven, R, Python, Scala, Mockito, JPA, JSP, HTML, Struts, Ajax, Spring, Toad, MongoDB, Calypso, RShiny, MongoDB, NextFlow.
