Dear Hiring Manager,

I am writing to express my strong interest in a Bioinformatics position. With a background in data science, genomics, and software development, I bring a multidisciplinary profile that combines computational skills with experience in biological data analysis.

During my time at the Josep Carreras Research Institute, I worked on large-scale genomic and multi-omics datasets, developing custom analytical pipelines and applying machine learning techniques to extract meaningful biological insights. I have hands-on experience working with high-dimensional data, as well as building scalable solutions using Python, R, and HPC environments. This experience allowed me to contribute to scientific publications and collaborate with both academic and industry partners.

In my current role as a Data Scientist, I continue to work with complex healthcare data, focusing on data preprocessing, statistical analysis, and visualization to support real-world decision-making. I have developed end-to-end pipelines, from raw data processing and anonymization to the deployment of user-facing tools, which has strengthened my ability to translate data into practical applications.

I am particularly motivated by the opportunity to work at the intersection of biology and data science, contributing to projects that have a direct impact on research and healthcare. I am comfortable working in multidisciplinary teams and Agile environments, and I enjoy tackling challenging problems involving large and complex datasets.

I would welcome the opportunity to bring my technical skills and scientific mindset to your team. Thank you for your time and consideration.

Sincerely,
Jerónimo Parra
